

23. PRACTICAL HIGH VOLTAGE OVERHEAD LINES

COURSE CODE : POL || 2 DAYS

A two-day theory, demonstration, and hands-on training programme conducted by experienced instructors, designed to provide comprehensive understanding of overhead line systems, including design, installation, and maintenance practices, to improve efficiency, performance, safety, and cost effectiveness.

COURSE CONTENT

- Identification of poles and installation materials
- Installation of materials and pole earthing
- Construction and design of high-voltage line conductors
- Electrical safety guidelines for working on high-voltage overhead line systems
- Methods for making dead-end (strain) joints and pin insulator ties

RECOMMENDED FOR

- Electrical Engineers
- Electrical Technician
- Electrician
- Electrical Chargeman (Authorized Person)
- Anyone responsible for electrical system maintenance
